

## COMPACT UMBRELLA

Your ProMaster Professional Compact umbrella has been built to the highest standards to ensure you years of trouble free use.

Because of the unique design of this umbrella, its main shaft may be larger than the opening size in some studio lights or light stand adapters. In order to make your ProMaster Compact Umbrella compatible in virtually any situation, we have included a solid core shaft extension.

If the diameter of the main shaft is too large for your device, simply screw the shaft extension into the base of the compact umbrella. For the most compact storage and transport, remove the shaft extension after use.
